## Geiger® two stage water intake screening system Ras Abu Fontas, Qatar

Ras Abu Fontas A3 desalination plant, Qatar has installed a robust Seawater Screening solution made by the Aqseptence Group.

### Challenge

Before seawater is desalinated, it has to be mechanically cleaned of debris in order to protect pumps, condensers and other sensitive downstream equipment from clogging and other damage. Aqseptence Group's well-proven Geiger® -branded two stage water intake screening system for coarse and fine screening was chosen for this purpose.

---

### Solution

For the first stage in the mechanical screening of seawater (coarse screening), efficient and robust Geiger® Cable-Operated Bar Screen with Grab Cleaners were implemented, and for the second (fine screening) the innovative Geiger® Centre-Flow Travelling Band Screens.

---

## Technical Data

The seawater screening equipment consisted of the following:

- 3 Geiger® Cable-Operated Bar Screen with Grab Cleaners
  - 3 Geiger® Centre-Flow Travelling Band Screens with spray water system and container
  - 1 stop log
  - 8 pen stocks
  - Control cabinet for fully automatic operation and a Geiger Impressed Current Cathodic Corrosion Protection System
- 
- Total Flow Rate per channel: 20,000 m<sup>3</sup>/h
  - Number of channels: 3
  - Bar Screen Spacing: 50 mm
  - Geiger® TBS filtration (mesh): 3.5 mm
  - Water Source: Sea Water

---

## Key Features

Total Plant Construction Time: 2016-2017

Benefits:

- Low/easy maintenance
- Robust and highly reliable
- Zero carry-over of debris to the clean water side
- Intense cleaning
